

WO 2005/020741

PCT/US2004/028930

I claim:

1. A hair roller comprising:
a flexible member having a first position and a second position, that when said flexible member is urged from the first position, said flexible member curls upon itself into the second position;
a fibrous material bordering said flexible member; and
a plurality of hook-type fasteners attached to one side of said fibrous material, wherein said fibrous material is between said flexible member and said hook type fasteners.
2. The device according to claim 1, in which the flexible member is comprised of metal.
3. The device according to claim 1, in which the flexible member is comprised of plastic.
4. The device according to claim 1, in which the fibrous material is comprised of cotton.
5. The device according to claim 1, in which the hook-type fasteners are comprised of plastic.
6. The device according to claim 1, in which the flexible member contains a plurality of apertures.

WO 2005/020741

PCT/US2004/028930

7. A hair roller for use with hair comprising:
- a flexible member having a first position and a second position, that when said flexible member is urged from the first position, said flexible member curls upon itself into the second position;
- a fibrous material bordering said flexible member; and
- a plurality of hook-type fasteners attached to one side of said fibrous material, wherein said fibrous material is between said flexible member and said hook type fasteners.
8. The device according to claim 7, in which the flexible member is comprised of metal.
9. The device according to claim 7, in which the flexible member is comprised of plastic.
10. The device according to claim 7, in which the fibrous material is comprised of cotton.
11. The device according to claim 7, in which the hook-type fasteners are comprised of plastic.
12. The device according to claim 7, in which the flexible member contains a plurality of apertures.
13. A hair roller comprising:

WO 2005/020741

PCT/US2004/028930

a flexible member having a first position and a second position, that when said flexible member is urged from the first position, said flexible member curls upon itself into the second position; and

a plurality of hook-type fasteners attached to said flexible member.

14. The device according to claim 13, in which the flexible member is comprised of metal.

15. The device according to claim 13, in which the flexible member is comprised of plastic.

16. The device according to claim 13, in which the hook-type fasteners are comprised of plastic.

17. The device according to claim 13, in which the flexible member contains a plurality of apertures.
